

Technology in Counseling and Mental Health Services Project

Scenario: Your team has been accepted into an internship program at the Child and Family Counseling Center. The social worker who is your mentor has requested that your team create an infographic that focuses on effective networking tools and technology which can be utilized in successful counseling and treatment techniques.

--

Instructions: As a group, use the card you selected to think of effective networking tools and technology that can be utilized in successful counseling and treatment techniques for your client(s) and incorporate the information as an infographic.

The infographic must include:

- a clear focus on the use of technology in counseling and mental health
- five networking tools and technology-based methods such as social media
- technology-based methods for collecting and disseminating health care data such as using tablets for replacing the conventional paper-based way of tracking patient's record
- three free mobile applications (apps) appropriate for the scenario

Information is required to be retrieved from reliable sources. Poster boards may also be used for the assignment.

Refer to website for instructions to create an infographic at:
